Web Admin Guide

Bulk Photo Management

September 2026

PhotoMatrix's bulk photo tools are selection-based modes on Manage > Photos (/manage). They are not a per-photo detail-page editor: they do not provide bulk title or theme editing. The available bulk actions are assigning a club to selected photos and permanently deleting selected photos.

1. Open a Bulk Mode

1. Sign in as an administrator and open Manage (/manage).
2. Choose Photos.
3. Under Bulk photo management, choose one of the displayed modes:

- Bulk Club Assignment
- Bulk Delete Photos

The mode opens a filterable list of photos. Use Change to return to the mode picker.

2. Filter and Select Photos

In either mode, narrow the list with the club filter (All clubs, No club, or a specific club) and the photographer filter (All photographers or a specific photographer). Changing either filter clears the current selection.

- Select individual photos with their checkboxes.
- **Select All** selects every photo currently shown by the filters.
- **Clear Selection** removes the current selection.
- The count beside the controls shows how many photos are selected.

Rows display a thumbnail, title, club, and photographer when available. These are identification details, not editable fields.

3. Assign a Club

Choose Bulk Club Assignment. After selecting one or more photos, choose a destination club and click Assign Club (N). The action is disabled until there is a selection and a club has been chosen. The operation changes the selected photos' club assignment; it does not edit their titles, themes, or photographer.

The UI reports the number of photos updated and clears the selection after success.

4. Delete Selected Photos

Choose Bulk Delete Photos, select the photos, and click Delete (N). Review the confirmation dialog, then choose Delete photos to confirm. This permanently removes the selected photo records; the action cannot be undone. On success, the UI reports the count and clears the selection.

5. API Behavior

The web UI uses the admin-only PATCH /api/photos/bulk-club endpoint with selected photoIds and a destination clubId, and DELETE /api/photos/bulk-delete with selected photoIds. The API validates that the ID list is non-empty and contains positive integers. The club-assignment endpoint applies a single club to all submitted photo IDs; it does not expose title or theme editing.
