PhotoMatrix

Web Guide

September 2026

This guide covers the PhotoMatrix website in a desktop or mobile web browser. It does not describe the native app.

1. Invites and signing in

PhotoMatrix uses invite tokens. Open the supplied invite link, or visit /join and enter the token. The site redeems the token; then sign in using Sign in in the header. An invite does not guarantee that an email will be sent.

After signing in, open My Photos from your avatar menu (or the mobile menu). If the invite was linked to a photographer profile in advance, My Photos offers Claim my profile. Select it to link that profile to your account. If no profile was prelinked, My Photos lets you choose an existing profile or create one.

To sign out, open your avatar menu on desktop, or open the mobile navigation menu and choose Sign out. Account settings are available from the avatar menu; choose Security & Passkeys there to manage security and passkeys.

2. Finding photos

Choose Gallery in the navigation to browse photos. Search within the gallery, then narrow results with club, theme, photographer, and date-range filters. You can select multiple clubs and themes; photographer is a single selection. Use Clear filters when it appears to reset the filters.

Use Group by to organize results by club, photographer, or theme, or leave them ungrouped. Sort by offers newest, oldest, photographer, likes, comments, or random; shuffle changes the random order. Load more fetches additional results when available.

Choose Share view to copy a link that preserves the current search, filters, grouping, and sort selection.

The home page also has a search across photos, photographers, and themes, plus links to the main collections and recent photos.

3. Photo details

Select a photo to open its detail page. You can view its description and photographer, club, and theme links when available. Signed-in users can like photos and post comments; sign in when prompted. Use the back link to return to the gallery or collection you came from.

4. Your profile and photos

Open My Photos from your avatar menu or the mobile navigation. If no photographer profile is linked yet, follow the page's prompts to claim, link, or create one.

- Edit your display name and bio with Edit. Select your avatar image to choose a replacement.
- Edit club memberships and their optional member-since years in Club membership.
- Edit your specialty themes in Specialty themes.
- Your photo list shows likes and comments received. Use its edit and delete controls to manage a photo.
- Choose Reorder photos, drag photos into position, then Save order. Choose Cancel to discard the rearrangement.
- **Public profile** opens the profile other visitors can see.

5. Uploading a photo

From My Photos, choose Upload photo. Choose an image from your device's photo library, use the camera picker where available, or drag an image into the picker. Choosing a file creates a preview; it does not upload it yet.

Enter a title, then optionally choose a club, theme, and description. For member uploads, the club list is limited to your club memberships (or no club). When ready, press Upload to transfer the image and save the photo. There is no member photo-from-URL import in this web form.

6. Themes

Open Themes to browse and search themes; choose one to see its photos and photographers.

To suggest a theme, use Propose theme from the specialty-themes editor on My Photos or from the theme selector on the upload page. The My Photos page shows submitted proposals and their pending, approved, or rejected status. You can withdraw a pending proposal there.

7. Clubs

Open Clubs to search clubs by name, location, or description. A club page includes its details, members, and photos.

Signed-in photographers can use Join or Leave on a club page. You must be signed in to join; if prompted that your photographer profile is missing, link or create one in My Photos first.

8. Photographers and navigation

Open Photographers to browse member profiles. A public photographer profile shows their available profile details, memberships, specialty themes, and photos.

On a smaller screen, open the menu button in the header for site sections and signed-in links such as My Photos and Sign out. Use the language control in the header to switch the site's display language.
